# Purpose

This assignment captures packets from the network and manually processes those packets to display all fields for the following protocols:

- IPv4
- TCP
- UDP
- ARP

# Data Types

## Arguments

Purpose: To hold the unparsed command-line argument information

Field	Type	Description
program_name	string	The name of the program
interface	string	The interface used for that certain OS to capture packets

## Settings

Purpose: To hold the settings the program needs to run.

Field	Type	Description
program_name	string	The name of the program
interface	string	The interface used for that certain OS to capture packets

## Context

Purpose: To hold the arguments, settings, and exit information

Field	Type	Description
arguments	Arguments	The command line arguments
settings	Settings	The parsed command line arguments

## Functions

Function	Description
hex_to_decimal	Convert hexadecimal value to decimal
hex_to_ip	Convert hexadecimal value to ip address format
hex_to_hardware	Convert hexadecimal value to hardware address format
hex_to_binary_with_spaces	Convert hexadecimal value to binary with spaces every 4 bits
check_bit	Check if a binary bit is 0 or 1
get_first_three_bits	Get the first 3 bits from string of bits
parse_ethernet_header	Parse the beginning ethernet header section of network packet
parse_ipv_packet	Parse the ipv4 packet and print out each field
parse_tcp_packet	Parse the tcp packet and print out each field
parse_udp_packet	Parse the udp packet and print out each field
parse_arp_packet	Parse the arp packet and print out each field
packet_callback	Function to handle each captured packet
capture_packets	Function to capture packets on a specified interface using filters
__main__	Main method that starts flow of program

## States

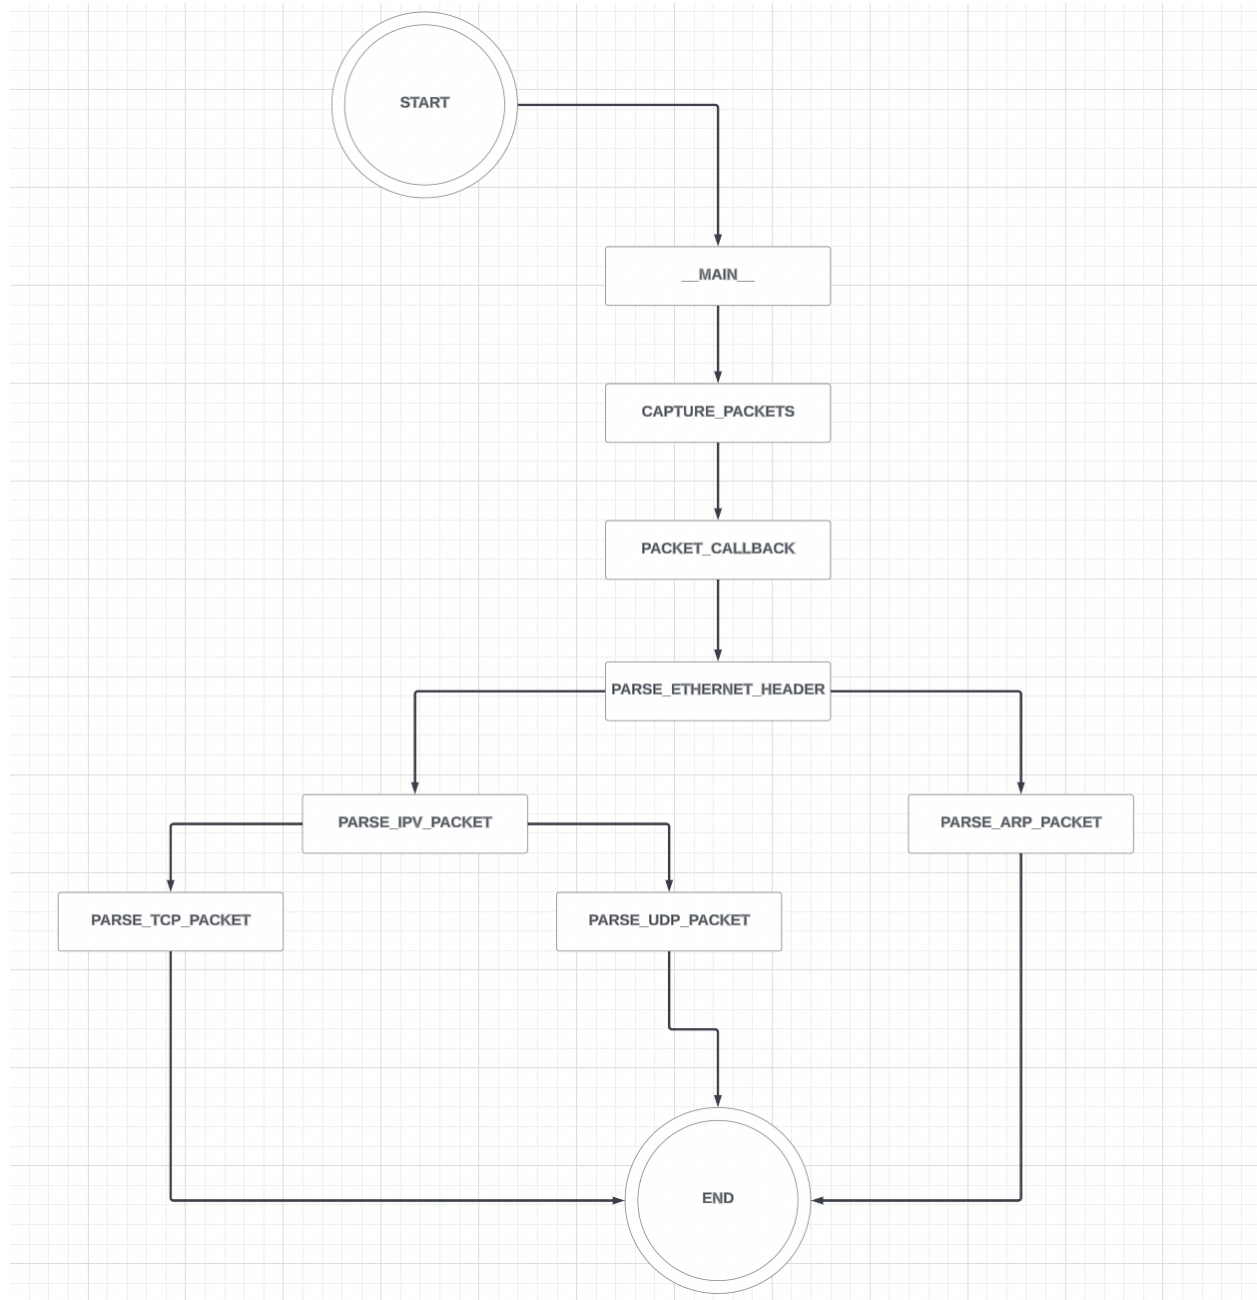

State	Description
__MAIN__	Main method that starts flow of program
CAPTURE_PACKETS	Function to capture packets on a specified interface using filters
PACKET_CALLBACK	Function to handle each captured packet
PARSE_ETHERNET_HEADER	Parse the beginning ethernet header section of network packet
PARSE_IPV_PACKET	Parse the ipv4 packet and print out each field

PARSE_ARP_PACKET	Parse the arp packet and print out each field
PARSE_TCP_PACKET	Parse the tcp packet and print out each field
PARSE_UDP_PACKET	Parse the udp packet and print out each field

## State Table

From State	To State	Function
START	__MAIN__	-
__MAIN__	CAPTURE_PACKETS	capture_packets
CAPTURE_PACKETS	PACKET_CALLBACK	packet_callback (within sniff)
PACKET_CALLBACK	PARSE_ETHERNET_HEADER	parse_ethernet_header
PARSE_ETHERNET_HEADER	PARSE_IPV_PACKET	parse_ipv_packet
PARSE_ETHERNET_HEADER	PARSE_ARP_PACKET	parse_arp_packet
PARSE_IPV_PACKET	PARSE_TCP_PACKET	parse_tcp_packet
PARSE_IPV_PACKET	PARSE_UDP_PACKET	parse_udp_packet
PARSE_ARP_PACKET	EXIT	-
PARSE_TCP_PACKET	EXIT	-
PARSE_UDP_PACKET	EXIT	-

# State Transition Diagram

# Pseudocode

## hex\_to\_decimal

### Parameters

Parameter	Type	Description
hex_string	string	A string of hex bits

### Return

Value	Reason
decimal_value	The decimal version of converted hex bits

### Pseudo Code

```
convert hex_string to decimal_value  
return decimal_value
```

## hex\_to\_ip

### Parameters

Parameter	Type	Description
hex_string	string	A string of hex bits

### Return

Value	Reason
ip_value	The hex bits converted into an ip address

## Pseudo Code

```
split hex_string into pairs
set ip_value = Convert each pair to decimal
return ip_value
```

## hex\_to\_hardware

### Parameters

Parameter	Type	Description
hex_string	string	A string of hex bits

### Return

Value	Reason
hardware_value	The hex bits converted into a hardware address

## Pseudo Code

```
set hardware_value = split hex_string into pairs and add :
return hardware_value
```

## hex\_to\_binary\_with\_spaces

### Parameters

Parameter	Type	Description
hex_value	string	One hex bit

### Return

Value	Reason
spaced_binary	The hex bit converted into individual bits in sets of 4 bits each

## Pseudo Code

```
convert hex_value into binary bits
set spaced_binary = binary bits split into 4s
return spaced_binary
```

## check\_bit

### Parameters

Parameter	Type	Description
bit	integer	Binary bit

### Return

Value	Reason
bit	The bit is 1 or 0

## Pseudo Code

```
check if bit is 0 or 1
return bit
```

## get\_first\_three\_bits

### Parameters

Parameter	Type	Description
binary_value	string	String of binary bits

### Return

Value	Reason
first_three_bits	The first three bits from the binary string

## Pseudo Code

```
set first_three_bits = extract first three from binary_value  
return first_three_bits
```

## parse\_ethernet\_header

### Parameters

Parameter	Type	Description
hex_data	string	The entire packet contents in hex form

### Return

No returns.

## Pseudo Code

```
extract ether_type from hex_data  
If ether_type == 0800  
    parse_ipv_packet  
Else if ether_type == 0806  
    parse_arp_packet  
Else  
    Print error
```

## parse\_ipv\_packet

### Parameters

Parameter	Type	Description
hex_data	string	The entire packet contents in hex form

### Return

No returns.

## Pseudo Code

```
Extract each field from hex_data  
Check for options and data based on header_length
```

```
Print each field using appropriate conversion method
Extract protocol field
If protocol == 6
    Parse_tcp_packet
Else if protocol == 11
    Parse_udp_packet
Else
    Print error
```

## parse\_tcp\_packet

### Parameters

Parameter	Type	Description
hex_data	string	The entire packet contents in hex form
packet_endpoint	integer	The place in the hex_data where the ipv4 contents finished

### Return

No returns.

### Pseudo Code

```
Extract each field from hex_data
Check for options and data based on header_length
Print each field using appropriate conversion method
```

## parse\_udp\_packet

### Parameters

Parameter	Type	Description
hex_data	string	The entire packet contents in hex form
packet_endpoint	integer	The place in the hex_data where the ipv4 contents finished

### Return

No returns.

### Pseudo Code

```
Extract each field from hex_data
```

Print each field using appropriate conversion method

## parse\_arp\_packet

### Parameters

Parameter	Type	Description
hex_data	string	The entire packet contents in hex form

### Return

No returns.

### Pseudo Code

Extract each field from hex\_data

Print each field using appropriate conversion method

## packet\_callback

### Parameters

Parameter	Type	Description
packet	integer	The entire packet contents as bytes

### Return

No returns.

### Pseudo Code

Convert packet into hex\_data

Call parse\_ethernet\_header

## capture\_packets

### Parameters

Parameter	Type	Description
-----------	------	-------------

interface	string	The interface used for that certain OS to capture packets
capture_filter	string	The packet type to be captured
packet_count	integer	Number of times to capture packet

## Return

No returns.

## Pseudo Code

```
Call sniff using parameters
```

## \_\_main\_\_

## Parameters

No parameters.

## Return

No returns.

## Pseudo Code

```
Extract arguments from command line
```

```
Call capture_packets once each for ip+tcp,ip+udp and arp
```
